Urol Colomb 2020;29:113–114.

The care of patients diagnosed with rare genitourinary tumors have often been compromised by the lack of standardization in the diagnostic evaluation and therapeutic management in significant part due to the lack of regional or national expertise in the management of such malignancies and/or the paucity of information supporting an evidence based approach to these

conditions. The GSRGT embraces the involvement of all international countries and colleagues in this effort and in fact we would like to insure under-represented parts of the world have a significant representation and voice within the society. In this regard, we are very pleased to announce the formal establishment and launch of the **Global Society of Rare GU**

Tumors which is solely dedicated to advancing the care for these rare genitourinary tumors through promoting optimal treatment strategies, innovative research, and a comprehensive education platform for patients, families, and the entire healthcare team along with a commitment to patient advocacy. The GSRGT will gather international thought leaders with expertise on the subject matter and we are honored to share the schema of our leadership team and governing council (please see attached). This society was created as an impetus that these rare tumors are poorly studied and constitute a diagnostic and treatment conundrum and that a dedicated commitment to their care and study would be quite impactful in improving patient outcomes and quality of life in addition to fostering opportunities for research collaborations.

We welcome all interested colleagues and friends to join our society using its newly developed webpage <https://www.gsrgt.com> (and accessing the membership icon to join as new members). The Web site will be continually updated to provide you with the most up-to-date information on our exciting initiatives through our many working groups and subcommittees. In addition, new members of our society (will have at no ensuing charges) be able to attend our planned 1st Global Summit which will be held virtually on Friday December 4th and Saturday December 5th, 2020. Feel free to visit and/or follow the Twitter page for the **Global Society of Rare GU Tumors** (@GTumors) as well.

Warm regards and looking forward to hearing from you all.
